13. ABSTRACT	

This report covers the third quarter of 1971 with the major yield of information coming from the approximately 30 periodicals known to report the most advanced and interesting findings in Soviet laser technology. This as well as the previous four reports covers the following topics: (1) laser research -- solid state, liquid, gas and chemical lasers; UV; components; nonlinear optics; spectroscopy of laser materials; short pulse generation; crystal growing; and general theory; (2) laser applications -- biological effects, communications, computer technology, holography, instrumentation, materials processing, and plasma generation.

#### BIBLIOGRAPHY OF SOVIET LASER DEVELOPMENTS

No. 5, July - September 1971

Advanced Research Projects Agency

ARPA Order No. 1622

December 2, 1971

This research was supported by the Advanced Research Projects Agency of the Department of Defense and was monitored by the Air Force Office of Scientific Research under Contract No. F44620-70-C-0081. The publication of this report does not constitute approval by any government organization or Informatics Tisco, Inc. of the inferences, findings, and conclusions contained herein. It is published solely for the exchange and stimulation of ideas.

ARPA Order No. 1622
Program Code No.: OF10
Name of Contractor:
Informatics T sco, Inc.
Effective Date of Contract:
January 1, 1971
Contract Expiration Date:
December 31, 1971
Amount of Contract: \$215,672

Contract No.: F44620-70-C-0081
Principal Investigator:
Stuart G. Hibben
Tel: (301) 779-2850
Short Title of Work:
"Soviet Lasers"

Prepared By

# Introduction

This bibliography has been compiled by the staff of Informatics Tisco, Inc. in response to a continuing contractual assignment to monitor current Soviet-bloc developments in the quantum electronics field. Of all material reviewed, the major yield has been from the approximately 30 periodicals which are known to report the most advanced and interesting findings in Soviet laser technology.

The period covered is the third quarter of 1971, and includes all significant laser-related articles received by us during that interval. The structure and selection criteria are basically those used in the preceding reports.

For convenience we generally have abbreviated source names; a source abbreviation list and an author index are included. Unless indicated by a parenthesized Reference Journal (RZh) notation, all cited sources are available at Informatics Tisco, Inc.

Acknowledgement is due to the consultant effort of Mr. Yuri Ksander (Rand Corporation) for assistance in selection and structure of the material.
